**Subject: Participation of Civil Society and Rights Holders in the Ad Hoc Intersessional Open-ended Expert Groups**

Dear INC Executive Secretary Jyoti Mathur-Filipp,  
CC Ambassador Vayas Valdivieso,  
CC Bureau members,

This is regarding the letter from the INC Executive Secretary dated 30th May 2024, inviting Member States to nominate experts to participate in the work of the ad hoc intersessional open-ended expert groups.

As representatives of civil society and rights holders, we note with concern the restrictions on the participation of Observers during Intersessional Work in preparation for INC-5. Many organizations have been involved in the process of negotiating a legally binding instrument to end plastic pollution, including in the marine environment, from the beginning. These organizations have immense expertise on the issues being discussed and have dedicated that expertise, as well as time and financial resources, to participating in the Intergovernmental Negotiating Committee (INC) process. Once again, we reaffirm our commitment to this process until a fit-for-purpose treaty is agreed upon.

Observer participation offers an essential opportunity to civil society and rights holders, including impacted fenceline communities, Indigenous Peoples, women, youth, representatives of grassroots communities, and stakeholders like scientists, consumers, faith groups, health and environmental experts, and policy experts to share their expertise and experience and present practical, equitable, and well-founded solutions based on their firsthand experiences and expertise which should feed into a strong treaty.

As you may recall, during the final plenary of the fourth session of the INC in Ottawa, the African Group, represented by its Chair, Ms. Lydia Essuah from Ghana, along with support from many other countries, demanded the participation of Observers in intersessional work. The response given by the Chair was promising, raising our hopes that the request would be fully considered, and that a transparent and inclusive process would be established.

We would like to emphasize that Intersessional Work is an integral part of the INC process and, by default, governed by the same rules of procedure. Rules 55 and 56 thus allow accredited non-governmental organizations to participate in any INC-related sessions as Observers.

Furthermore, we are concerned with the lack of clarity regarding the selection of the technical experts. These technical experts must be unequivocally free from conflicts of interest, and we have not seen any procedures for addressing this in the intersessional meetings. The technical experts should be independent scientists, Indigenous Peoples, frontline and fenceline communities, consumer and health advocates, representatives of civil society organizations, and other experts without vested interests in the plastics value chain, including representatives from targeted communities who are under direct pressure from rapidly declining ambitions that threaten to nullify the UNEA mandate. Many existing bodies, including the Persistent Organic Pollutants Review Committee (POPRC), would be good models for addressing this. Therefore, we request clarification on the process for the selection of the technical experts.

Moreover, in the case of most developing countries, there are fewer government delegates (often 1-2) and experienced observers from the same countries could serve a complementary role to their respective country delegations during the negotiations.

We express our deepest concern about the lack of clarity on Observers' participation procedures in the Intersessional process, including the meetings in Thailand. We are mindful of the space and logistical constraints of the venue; however, we request you consider an open application process that would allow accredited Observer organizations to register at least one representative for an in-person meeting without the need for a letter of support from their governments. Considering the significant resources required for in-person attendance, coupled with the inherent limitations faced by civil society and rights holders observers, we strongly urge the exploration of a hybrid solution incorporating live webcasts of sessions to enhance observer participation. For accredited Observer organizations, registration for online sessions should be open and not limited to one representative per organization.

We hope to receive a positive and prompt response from you.

Sincerely,
